Md. Korimul Jaman

Computer Science & Engineering Student | Aspiring Software Engineer

Dhaka, Bangladesh • WhatsApp: +880 1728-694997 • Email: Available Upon Request • GitHub: github.com/Sihab75 • LinkedIn: link

SUMMARY

Motivated Computer Science and Engineering undergraduate student at Green University of Bangladesh (Batch 251) with a strong foundation in C++ programming, object-oriented concepts, and algorithmic problem solving. Experienced in developing native Android applications using Kotlin and Jetpack Compose, as well as desktop algorithmic tools in Python. Passionate about software architecture, data structures, and continuous technical growth. Seeking software engineering internships and collaborative development opportunities.

EDUCATION

Green University of Bangladesh 2025 - Present | Dhaka, Bangladesh

Bachelor of Science in Computer Science and Engineering (CSE)

- Department of CSE, Batch 251 (Student ID: 251002084)
- Relevant Coursework: Structured Programming (C/C++), Data Structures, Computer Architecture, Discrete Math

Higher Secondary Certificate (HSC) Passing Year: 2024

Science Group

Secondary School Certificate (SSC) Passing Year: 2022

Science Group

TECHNICAL SKILLS

Programming Languages: C++, C, Kotlin, Python
Computer Science Fundamentals: Data Structures, Algorithms, Object-Oriented Programming (OOP), Complexity Analysis
Mobile & Software Development: Android Native (Jetpack Compose, Room Database), GUI Development (CustomTkinter)
Developer Tools & Platforms: Git, GitHub, Android Studio, VS Code, Linux/Windows CLI, Gradle
Areas of Interest: Software Engineering, Problem Solving, Machine Learning & AI Applications

PROJECTS

Smart Life Manager — Android Student Productivity Companion github.com/Sihab75/smart-life-manager

Kotlin • Jetpack Compose • Material 3 • Room Database (Offline-first) • Firebase • Node.js Backend

- Engineered an offline-first native Android productivity application unifying personal finance tracking, study scheduling, Pomodoro timer, task management, and competitive programming progress.
- Integrated local persistence with Room Database and synchronized optional cloud backups via Firebase Authentication, Firestore, and Cloud Messaging.
- Connected an AI Study Assistant through a lightweight Express.js proxy to safely query AI language models without exposing API secrets in the mobile binary.

Huffman File Compressor — Lossless File Compression Engine github.com/Sihab75/start

Python 3 • CustomTkinter • Min-Heap Priority Queue • Binary Prefix Tree • SHA-256 Integrity Verification

- Implemented from-scratch lossless Huffman Coding compression & decompression for arbitrary binary files without external compression packages.
- Designed a responsive multithreaded dark-themed GUI featuring live canvas visualization of the generated Huffman binary tree and frequency table.
- Integrated SHA-256 cryptographic checksums to verify bit-perfect data integrity between original and restored files.

Algorithmic Problem Solving & Data Structures Practice github.com/Sihab75/localRepo

C++ • STL • Graph Algorithms • Number Theory • Greedy Algorithms

- Solved 74+ algorithmic problems across Codeforces, CodeChef, and LeetCode focusing on optimal time and space complexity.
- Implemented fundamental data structures and algorithmic patterns in modern C++.

COMPETITIVE PROGRAMMING PROFILES

- Codeforces: codeforces.com/profile/korimuljaman (Rating: 693 | 74+ Problems Solved in C++)
- CodeChef: codechef.com/users/sihab_75 (Rating: 1417 | Division 3)
- LeetCode: leetcode.com/u/Korimul/ (Problem Solving Practice)
- GitHub: github.com/Sihab75 (Active project repositories in Kotlin, Python, and C++)
